1.Indroduction

2.Objectives

3.System Overview

4.Working

5.Features

6.Modules

7.Advantages

8.Disadvantages

9.Future Scope

10.Conclusion

1.Introduction:

The Library Management System is a software application designed to automate library operations such as book management, issuing, returning, and record keeping.

2.Objectives:

- To reduce manual work
- To manage books efficiently
- To maintain user records
- To improve accuracy and speed

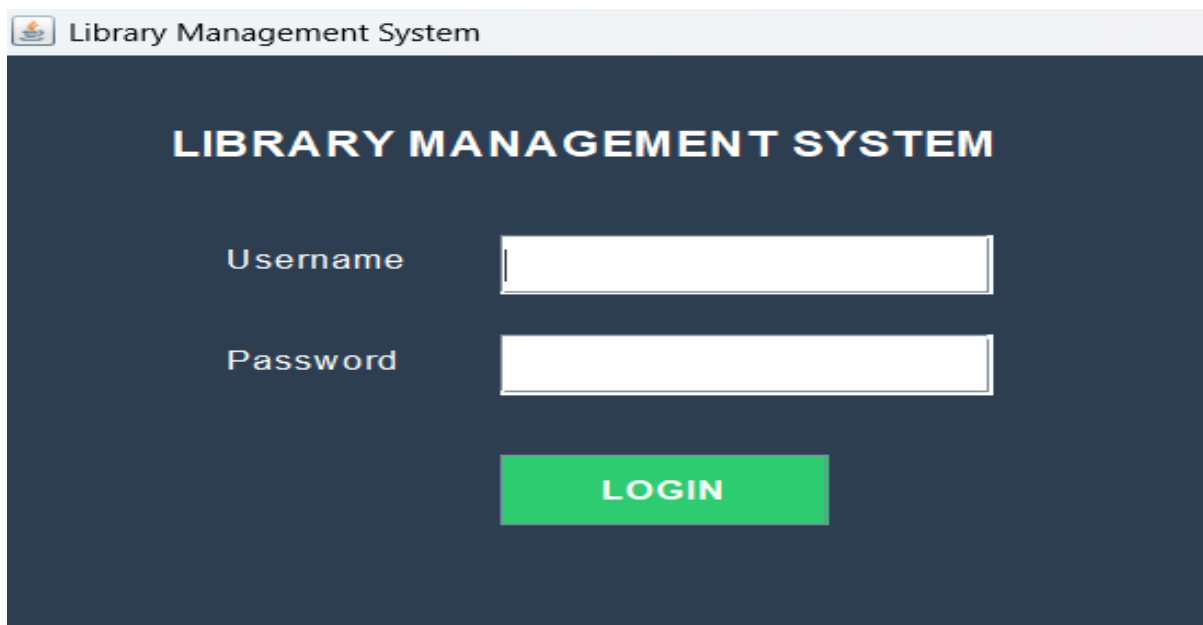

3.System Overview:

This system is developed using Java (Swing GUI) and can be extended with database integration for better data management.

4. Working

- User login
- Book records are managed

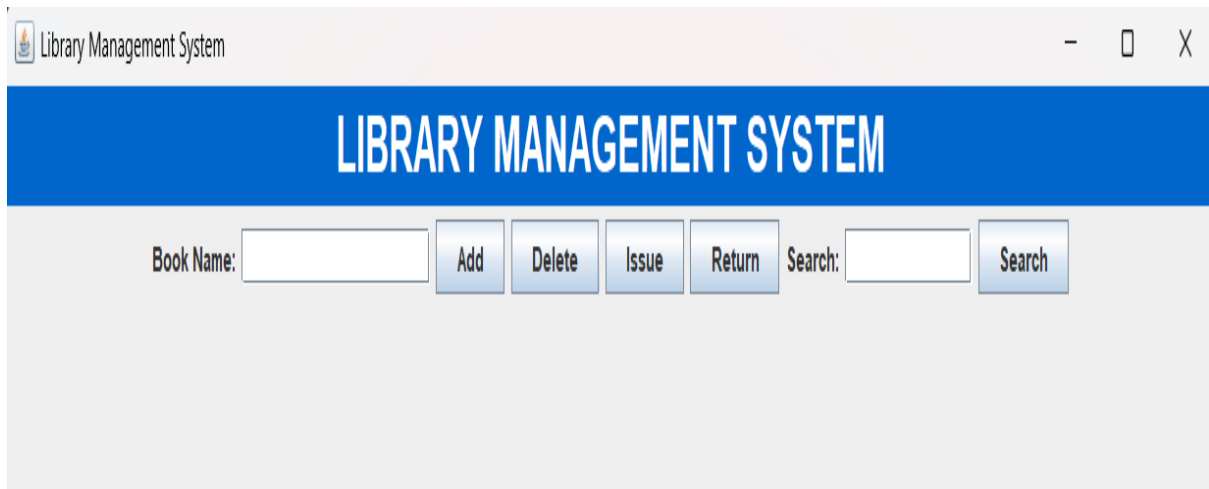

- **Books are issued to users**
- **Return process updates records**
- **Data is stored in system/database**

The screenshot shows a web browser window titled "Library Management System". The main content area has a dark blue background with the title "LIBRARY MANAGEMENT SYSTEM" in white, bold, uppercase letters. Below the title, there are two input fields: "Username" and "Password", both with white text and white input boxes. A green "LOGIN" button is positioned below the password field.

5. Features

- **Add, delete, update book**
- **Search functionality**
- **Issue & return system**
- **GUI-based interface**
- **Secure login system**

Library Management System

LIBRARY MANAGEMENT SYSTEM

Book Name: Search:

7. Advantages

- Saves time
- Reduces paperwork
- Easy tracking
- Improves efficiency

8. Disadvantages

- Requires technical knowledge
- System dependency
- Data loss risk without database

9. Future Scope

- Cloud-based system
- Mobile application
- Barcode scanning
- AI recommendation system
- Online library access

10. Conclusion

The Library Management System is an efficient and scalable project that simplifies library operations and reduces manual workload.
